FreightTiger
Digitizing India's road logistics

2 OPEN POSITIONS

Software Engineering Intern

AI & Data · Full Time

Join FreightTiger's engineering team to build next-generation products at the intersection of AI, data, and logistics technology — working alongside experienced engineers to take ideas from prototype to production.

WHAT YOU'LL WORK ON

- **Agentic AI systems** — building LLM-powered agents with tool-use, multi-step planning, and RAG-based workflows. Familiarity with frameworks like LangChain/LlamaIndex is a plus, not required.
- **Python engineering** — writing clean, production-grade code to ship scalable backend and data-processing solutions, with solid Git and debugging fundamentals.
- **Data pipelines & streaming** — designing and optimizing systems to process high-volume, real-time data. Exposure to tools like Kafka, Airflow, or Spark is a plus.
- **Data Structures & Algorithms** — applying strong fundamentals to solve engineering problems at scale.
- **Full lifecycle exposure** — collaborating directly with senior engineers and product teams, including testing and evaluating what you build in production.

What you'll gain: direct mentorship from senior engineers, and hands-on exposure to production-grade AI and data systems.
